Efficient processes from factory floor to main IT infrastructure

Here at Hitex we are ideally placed to assist you in getting the most out of your industrial network. Whether you need to connect the factory floor to the corporate network, troubleshoot network problems or harvest data to be able to understand how to increase productivity, we can help.

Network Diagnostics

We supply diagnostic tools from Softing - providing both PROFIBUS & PROFINET tools. They prevent failures before production grinds to a halt, and quickly sort out issues if your network requires maintenance. Additionally, the tools can be used by staff with both basic and expert engineering knowledge.

Interface cards & gateways

Our industrial communication interface cards connect computers to Fieldbus and Industrial Ethernet networks. The gateways provide a vertical link between the factory & the corporate IT network via a range of protocol converters from serial or Fieldbus to Ethernet, delivering real-time information to all levels and departments.

OPC Classic and OPC UA

With over 20 years experience in OPC, Softing and Hitex are your OPC partners of choice. Together we offer a complete set of OPC Classic and UA development tools and end user products. Whether you are approaching OPC as a manufacturer, software developer or end user, we offer a comprehensive set of services to help you achieve your goals.

PLC Connectivity

In any production line or industrial process you will find many diverse and complex systems creating very real challenges for both control engineers and IT managers. Over time, this leads to disjointed and sprawling architectures with difficult or inefficient communication. We are able to offer a wide range of PLC-related products to address and simplify this problem.
